

SUBSTATION AUTOMATION, METERING AND SCADA

WoodBeam substation communication solutions simplify substation integration and automation, providing the utility with:

- NERC CIP compliant security
- System wide device automation and integration
- Automatic event file retrieval
- Remote control and engineering management passthru
- Protocol translation
- Data concentration and distribution
- Industrial Ethernet LAN
- Substation SCADA
- Metering and energy management

The solution allows you to build a comprehensive communications infrastructure that is fully integrated, delivers maximum reliability and improves service quality.

MBE Minerals South Africa

40 years and counting

MBE Minerals South Africa, with a legacy of more than 40 years on the African continent, will share its technology capabilities and services with visitors to bauma ConExpo. Managing director Johannes Kottman explains that the company is focused on providing a complete technical solution for the mining sector that encompasses innovative technology, capital equipment and support services.

Joest Kwatani

Customers get those good vibrations

Specialist vibrating equipment manufacturer and supplier Joest Kwatani continues to demonstrate its capacity to provide turnkey screening solutions to the mining sector. A recent contract saw the company providing design, engineering, fabrication and delivery of a range of vibrating screens and feeders to a manganese mine in the Northern Cape.

"Our equipment is designed specifically to perform in heavy duty applications such as the manganese sector, where in this instance the feed rate is 900 tonnes per hour," says Joest Kwatani managing director Kim Schoepflin.
